

Please do not take action against XM or other Satellite radio providers and reject NAB's petition 04-160. I feel that satellite radio providers should be able to deliver any and all programming. I pay for the service and deserve full access to any info available. If traditional radio provided the same level of entertainment and informative programming I wouldnt need satellite radio. But that is not the case. Please allow me to pay for, and receive the best radio programming available!!! Thanks
